

Introducing Radyne's New

Voyager™ Line-Up

Hand-held Induction Heating Systems

Get Off the Bench

Radyne's innovative new Voyager portable hand-held induction heating system is designed for use in tight spaces. For brazing, soldering, heating, drying, coating and heat shrink, the Voyager moves the assembly line directly to the finished assembly.

The Power of Mobility

- Provide the power of induction to "hard-to-reach" areas
- Lightweight and compact design
- Mobile or Bench top Configurations
- Available with integrated chiller system for maximum flexibility – just add power
- Great for confined space applications

Improve Efficiency

- Induction technology heats the metal directly, reducing the energy required to achieve desirable results.
- Produce faster, more consistent, and higher quality braze joints than what is possible with a flame torch.

Put Out The Flame

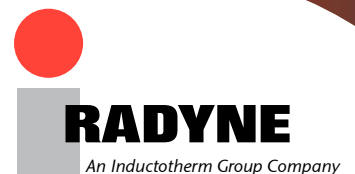

- Remove torches and open flame from the workplace
- Improve operator safety and reduce training requirements
- No more inventorying, moving or paying for gas cylinders
- Eliminate the need for Carbon Monoxide (CO) venting
- Achieve a superior finish without part sooting

Control you can count on

- Repeatability with easily programmable heating recipes
- Integrated trigger for ease of use (optional foot switch)
- Adjustable power levels for precise results
- Standard or custom inductors available

Voyager™

Portable Hand Held Induction Heating System

Mobile package includes

Built in technology

- Intuitive, high speed Digital iQ™ control platform
- Store thousands of recipes
- Ramp-up to 100% power in less than a second

Available add-on technology

- Remotely connect up to 10 VersaPower® Xtreme™ power supplies
- Real time Monitoring and tracking of parameters
- Logging, exporting and printing of data for product traceability
- Simplified keyboard recipe creation
- Single password protected location for all process recipes

Mini

For big jobs that require lots of power

Micro

For medium sized jobs. The perfect balance of power and lightweight

Nano

Our Smallest and most lightweight model
